

LONG-RANGE BALLISTIC SOLVER (KESTREL 5700 ELITE)

4 HOURS

PRICE

\$100

This course will cover how to properly input correct data into the solver and build gun profiles to obtain the most accurate data from your device.

We will cover the importance of muzzle velocity and ballistic coefficient.

As well as how to properly true your muzzle velocity to increase accuracy at extended distances and how environmental factors affect trajectory.

We will cover numerous features of the Kestrel 5700, including obtaining a max point-blank range of your firearm, the Accuracy 1st page and its features, direction of fire, inclination and/or declination shooting, and weather. This course is a must for serious long-range shooters, whether it be for competition or hunting.

A Kestrel 5700 Elite will be provided for each student to use during class.

Materials Required to Participate:

- Notepad/Pen
- Precision or Hunting Rifle with Scope
- Ammunition that you will be utilizing
